

Body Height Changes at Walking Transitions

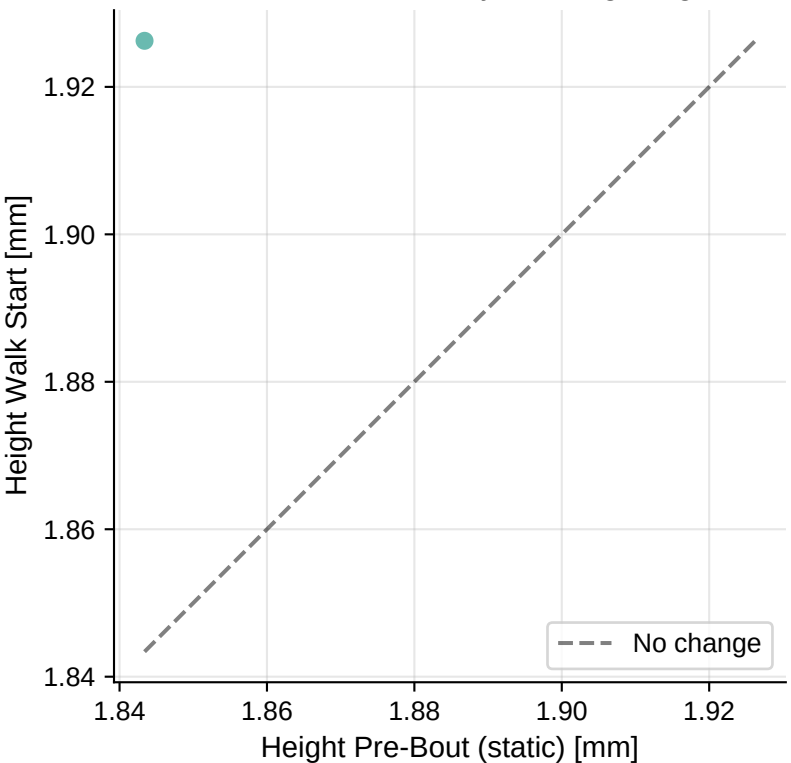

START Transition: Static ? Walking
(n=1 bouts)

END Transition: Walking ? Static
(n=2 bouts)

Paired: Static vs Early Walking Height

TRANSITION ANALYSIS SUMMARY

START TRANSITION (Static ? Walking):

Valid bouts analyzed: 1
Mean height change: nan μm
Median: nan μm
Std: nan μm

Rise (?>0): 0 bouts
Lower (?<0): 0 bouts
Wilcoxon p: nan

END TRANSITION (Walking ? Static):

Valid bouts analyzed: 2
Mean height change: -15.0 μm
Median: -15.0 μm
Std: 7.6 μm

Rise (?>0): 0 bouts
Lower (?<0): 2 bouts
Wilcoxon p: nan

INTERPRETATION:

? > 0 at START = fly RAISES body when starting to walk
? < 0 at END = fly LOWERS body when stopping
